

# HubSpot – Share or Export Reports and Dashboards

Knowledge Base → Reporting & Data → Dashboards

Article: Share or export reports and dashboards

Last updated: June 6, 2025

With any HubSpot subscription, you can share reports and dashboards with your team. Reports and dashboards can be shared via email, Slack, and Google Chat either once or on a recurring basis, depending on the configuration of the report or dashboard.

## Share a report

From the reports dashboard, you can export a report as a CSV or Excel file, or email the report to users in the account. You can also schedule recurring report emails on a daily, weekly, or monthly basis. Multiple recurring emails can be set up for a single report.

Shared data files will include fields that have been added to the report:

- Single object reports export properties added to the **Selected properties** section of the **Data** tab in the report builder.

- Advanced custom reports export the fields added to the **Configure** tab of the report builder.

## Send and schedule emails for an individual report

- 1 In your HubSpot account, navigate to **Reporting > Reports**.
- 2 Hover over the report you want to email, then click **Actions > Share via**.
- 3 In the right panel, select **Email**, then click **Next**.
- 4 By default, the email is set to send once. To make it recurring, in the **Is this a recurring email?** section, select **Yes, this is a recurring email**.
- 5 Click the **Internal recipients** dropdown menu and select users to receive the email.
- 6 To add a data file to the email, click the **Attach downloadable file** dropdown and select a data type. If **No attachment** is selected, a visual of the report is emailed instead of a data file.
- 7 To send the email to non-HubSpot users, enter their email addresses in the **Other recipients** field. Their domains must be verified.
- 8 In the **Email subject** field, enter the subject line that will appear in the recipients' inboxes.
- 9 In the **Message** field, enter the email body text.
- 10 If the email is recurring, provide an **Email nickname**, choose a cadence from the **Schedule** dropdown (Daily, Weekly, Monthly), select days/dates, and the **Time of day**. Report data is captured two hours before the send time. A summary of delivery dates appears at the bottom of the panel.
- 11 Optionally click **Preview** to open a preview of the report recipients will receive in a new tab.
- 12 To finalize, click **Send now** or **Schedule email**.

When sending report data as an attachment, the following reports are **not** supported: web analytics, reports with email as the data type, annotations, custom reports, reports with unified data type, and sales analytics widget reports.

## Export a report

For reports that aren't supported through the share function, you can send a one-time email to your own user email address containing a data file. This email cannot be scheduled as recurring.

- 1 In your HubSpot account, navigate to **Reporting > Reports**.
- 2 In the left sidebar under **Analytics suites**, expand the relevant suite (e.g., Marketing), then expand a category (e.g., Web traffic analysis) and select a report (e.g., Pages).
- 3 At the top of the report, configure the **Date range**, views (**All analytics activities**), and any **Advanced filters** as needed.
- 4 In the upper right, click **Actions**, then select **Export unsummarized data**.
- 5 Update the export **Name** if needed.
- 6 Choose a **File format** from the dropdown.
- 7 Click **Export**. You'll receive a notification and email when the export is ready.

## Share a report as an image

- 1 In your HubSpot account, navigate to **Reporting > Reports**.
- 2 Hover over the report, click **Actions**, then select **Export as an image**.
- 3 Adjust the image width using the slider or by entering a pixel value.
- 4 Click **Save**. The image downloads with the applied scale.

## Share a report from a dashboard

From a dashboard, you can send an individual report's data to multiple email addresses. Dashboard-based report emails can also be configured to send on a recurring schedule.

- 1 In your HubSpot account, navigate to **Reporting > Dashboards**.
- 2 On the dashboard, locate the report. In the top right of the report, click the menu icon and select **Share via > Email**.
- 3 Choose whether the email will be recurring. If yes, provide an **Email nickname**, select a **Schedule** (Daily, Weekly, Monthly), plus days/dates and the **Time of day**. Report data is captured two hours before send time.
- 4 Click the **Recipients** dropdown and select users to send the email to.
- 5 To include a data file, use the **Attach downloadable file** dropdown and select a format. If **No attachment** is selected, a visual of the report is sent instead.
- 6 Set the **Email subject** and **Message** fields.
- 7 Click **Send now** or **Schedule email** to complete setup.

Only **Single object**, **Event-based**, and **Customer journey** reports can be sent as CSV, XLS, and XLSX by email. For unsupported reports, export the individual report's data separately.

## Manage recurring report emails

If you're a Super Admin or the owner of a report, you can modify or delete its recurring email schedules.

- 1 Navigate to **Reporting > Reports**.
- 2 Hover over the relevant report and click **Actions > Manage recurring shares**.
- 3 In the dialog box, you can edit, reassign, or delete recurring emails. To edit, click the email nickname. To change the owner, select **Actions > Change owner** and choose a new owner. To delete, select **Actions > Delete** and confirm.

A recurring email must be deleted at least two hours before its scheduled send time. If deleted within two hours of sending, the email will still be sent to scheduled recipients.

## Share a dashboard

You can send an email that includes a data file of your dashboard reports either once or on a recurring basis to HubSpot users. For Professional and Enterprise subscriptions, you can send a one-off dashboard email to non-HubSpot users as well.

Dashboard data sent in recurring emails is based on the permissions of the user who set up the email. For users to receive only their own data, each user should configure their own recurring dashboard emails.

When sending report data as an attachment, the following reports are not supported: web analytics, reports with email as the data type, annotations, custom reports, reports with unified data type, and sales analytics widget reports.

### Send and schedule emails for a dashboard

Recurring dashboard emails can only be sent to HubSpot users. Non-recurring dashboard emails can be sent to both HubSpot and non-HubSpot users. When sending to a non-HubSpot user, the recipient's email domain must be connected as an email sending domain.

- 1 Navigate to **Reporting > Dashboards**.
- 2 In the upper left, select the dashboard you want to share.
- 3 In the upper right, click **Share**, then select **Email this dashboard**.
- 4 Choose whether the email is one-time or recurring via the **Is this a recurring email?** section.
- 5 Use the **Internal recipients** dropdown to select HubSpot users.
- 6 For Professional and Enterprise, you can send a one-time email to non-HubSpot users via the **Other recipients** field, provided their domain is connected as an email sending domain. Limit: 100 emails per day to non-HubSpot users.
- 7 Set the **Email subject** and **Message** fields.
- 8 To include a downloadable data file, use the **Attach downloadable file** dropdown and select a format. If **No attachment** is selected, a visual of the dashboard is sent.
- 9 By default, all supported reports are included. To include only specific reports, select **Include selected reports** and choose the desired reports.
- 10 To send with dashboard filters applied, select **Send with current dashboard filters**.
- 11 Optionally preview the email, then click **Send now** or **Schedule email**. For recurring emails, configure the schedule (Daily, Weekly, Monthly), time of day, and confirm the delivery summary.

Only Single object, Event-based, and Customer journey reports can be sent as CSV, XLS, and XLSX by email from dashboards.

## Manage recurring dashboard emails

If you're a Super Admin or the owner of a dashboard, you can manage its recurring dashboard emails.

- 1 Navigate to **Reporting > Dashboards**.
- 2 In the upper left, select the dashboard you want to edit.
- 3 In the upper right, click **Share**, then select **Manage recurring emails**.
- 4 In the dialog box, you can edit, reassign, or delete recurring emails in a similar way to report recurring emails (change owner, edit nickname and schedule, or delete).

A recurring dashboard email must be deleted at least two hours before its send time. If it is deleted within two hours of sending, the email will still be delivered to scheduled recipients.

## Share reports via the Slack integration

If the Slack integration is installed, you can share dashboard reports with your team in Slack. Reports can only be sent to public Slack channels, not shared channels.

### Share dashboard reports via Slack

- 1 Navigate to **Reporting > Dashboards**.
- 2 In the upper right, click the **Actions** dropdown, then select **Share to Slack**.
- 3 In the right panel, choose the Slack channel and optionally add a message, then click **Share to Slack**. A preview of the reports will appear in Slack, and users with access can click through to the dashboard in HubSpot.

### Share an individual report via Slack

- 1 Navigate to **Reporting > Reports**.
- 2 Hover over the report, click **Actions > Share via**, then select **Slack** and click **Next**.
- 3 Choose whether to send once or on a recurring schedule via the **Is this a recurring email?** section.
- 4 Select whether you're sharing to a **Slack channel** or a **user**, then pick the specific channel or user from the dropdown.
- 5 Enter the Slack message text in the **Message** field.
- 6 If recurring, set an internal **Nickname**, choose the schedule (Daily, Weekly, Monthly), select days/dates and time. Data is captured two hours before send time, and a delivery summary appears at the bottom.
- 7 Optionally preview the report, then click **Send now**.

## Manage recurring Slack messages for reports and dashboards

If you're a Super Admin or the owner, recurring Slack messages for reports and dashboards can be modified or deleted.

- 1 Navigate to **Reporting > Dashboards** or **Reporting > Reports**.
- 2 Hover over the report, click **Actions > Share via**, then in the dialog box go to the **Other apps** tab to review Slack shares.
- 3 To change the owner, use **Actions > Change owner**. To edit details, click the Slack nickname. To delete, select **Delete** and confirm.

Slack-based recurring messages follow the same two-hour deletion rule: they must be deleted at least two hours before their scheduled send time to prevent delivery.

# Share reports via the Google Chat integration

Once the Google Chat integration is installed, you can share reports with a Google Chat space or an individual user, either once or on a recurring schedule.

Before sharing via Google Chat, ensure that users are mapped between HubSpot and Google Chat, and that the HubSpot app is added to the target Google Chat space.

## Share a report via Google Chat from the report list

- 1 Navigate to **Reporting > Reports**.
- 2 Hover over the report and click **Actions > Share via**. In the right panel, choose **Google Chat** and click **Next**.
- 3 Choose whether the message is one-time or recurring via the **Is this a recurring message?** section.
- 4 Select whether to share with a **Google Chat space** or a **user**, then pick the target from the dropdown.
- 5 Enter the Google Chat message text in the **Message** field.
- 6 If recurring, provide a **Nickname**, choose the schedule (Daily, Weekly, Monthly), select days/dates, and the time of day. Report data is captured two hours before send time, and delivery details are summarized at the bottom.
- 7 Optionally preview the report, then click **Send now**.
